A prospective study of the preoperative diagnosis of myocardial infarction in 354 consecutive cardiac surgical patients was undertaken to determine the accuracy of several noninvasive techniques. Prior to the operation the patients were examined by history taking, electrocardiography, noninvasive hemodynamic measurements, radionuclide angiography, and coronary arteriography. The results of the study were as follows: Preoperatively, hemodynamic measurements were useful in excluding the diagnosis of myocardial infarction in 19 of 24 patients. The results of electrocardiography were useful in excluding the diagnosis of myocardial infarction in only five of 24 patients. Positive radionuclide angiography was useful in excluding the diagnosis of myocardial infarction in 14 of 24 patients. Coronary arteriography was useful in excluding the diagnosis of myocardial infarction in all patients. The results of the study suggest that radionuclide angiography should be used as the first diagnostic procedure in patients with chest pain. The risk to the patient of coronary arteriography may be less than that of other noninvasive procedures. Development and application of the observer simulator. The performance of a medical observer who observes a two-dimensional image of a medical specimen using a clinical microscope is determined using a method of simulated observation. The simulator is a feedback device that produces video images of microscopic specimens using real-time processing. The observer observes the virtual microscope display using a head-mounted display. The observer's task is to answer a series of questions about the virtual images, and make a diagnosis about the specimen on the basis of the observed virtual images. The observer's performance is evaluated and analyzed using a series of medical diagnostic criteria. Dosage of salbutamol in the oral inhaler of children under 2 years of age with cough. This prospective study was undertaken to evaluate the dosages of salbutamol required to relieve cough in children under two years of age.

What's New In?

In AutoCAD, you can also import a shape file directly into a drawing. (You can also create the shape file using any tool that you'd like.) When you import a shape file in the Modeling workspace, your imported elements can have their properties set or edited in the Properties palette. (video: 1:20 min.) You can also create new shapes from imported elements. (video: 1:55 min.) When a new drawing is started, the Import and Markup options panel appears, where you can import from any one of your favorite file formats. Import and Markup options panel: A simple interface that's easier to use, even when you're new to AutoCAD. You can also now import point clouds, and can import and convert video and model video files. You can create your own custom import options. Import options panel: You can import point clouds directly into your drawings. (video: 1:35 min.) You can import video clips directly into your drawings, and can convert video files to point clouds. You can also export a model video file directly to a new AutoCAD drawing. (video: 1:10 min.) Using Custom Stencils: Custom stencils can be saved and used across multiple drawings to create complex composite objects in one go. Custom stencils can be used on the command line, within the Drawing Style Manager, and in a dialog window. A new tab appears when you create a new custom stencil. New custom stencils have a default graphic. You can create a custom stencil that appears as a property on your drawing, and you can set the color, symbol, and font for a custom stencil. You can edit any of the properties for a custom stencil at any time. (video: 1:25 min.) New custom stencils are saved automatically to an XML file that is created in your data directory. More accurate marking and easier control: New marking guidelines create more accurate markings on your drawings, and can be customized for a specific marking. (video: 1:20 min.) You can adjust the spacing between marks and the spacing between color swatches. You can set a custom color
